Database: MongoDB

Tools: Heroku, Firebase, Netlify, Vercel, Swiper.js, React Hook Form, Mongoose, Redux, git, and all npm installation tools.

Recent Project:

Name: **Repair Master**   **[In April 2021]**
Live link: [Repair Master](#) || [Client](#) || [Server](#)
Feature:

- On this site I use two main parts, one is Admin Dashboard and the other is Customer Dashboard.

- On the home page service and the review will show dynamically after add service by admin and add a review by the customer.

- In the Customer Dashboard, a customer can see his/her ordered service, total order, the current status of that order and can review the service. Customers can add service in his/her order list by complete payment with stripe. But all can be done only when he/she login by google or Facebook or creating a new account.

- In Admin Dashboard Admin can add Admin, add Service, delete service changing orders service status, and see brief information of this site.

Using Tools: _React, React-Router, Node, MongoDB, Express, Firebase, Bootstrap, Stripe, and other essential elements._

Name: **Fresh Supermarket**   **[In April 2021]**
Live link: [Fresh Supermarket](#) || [Client](#) || [Server](#)
Feature:

- On this site, anyone who has an account or login access can add a product, delete the product, order the product, and can see his/her ordered total product list.

- All add products will show dynamically on the home page.

Using Tools: _Firebase authentication, React, React-Router, MongoDB, Express Node.js, Bootstrap, and other essential elements._

Name: Fast-Rider   **[In March 2021]**

Live link: [Fast-Rider](#) || [Client](#)

Feature:

- On this site, customers can choose one option to ride somewhere after login by creating a new account or sign in with Google and Facebook.

- On this site, showing google Maps by the iframe.

Using Tools: *React, React-Router, Firebase authentication, Private route, Bootstrap, React hook form, and other essential elements.*

Name: My blog   **[In Feb 2021]**

Live link: [my-blog](#) || [Client](#)

Feature:

- Loaded the first 10 posts when the page loads, A button of "load more", if that clicked, their will be 10 more posts
- Have the option to update, delete the posts
- Option to sort columns with name, email. (ASC, DSC), Search.
- Pagination page size (Number of users displaying per page. Eg: 3, 5, All) can be changeable
- If user reload the page then show the list according to the state (filter/sort/pagination/page size) before the reload
- Clicking on a user's name will take User to the corresponding user profile page where the details for that user will be shown as well as his/her all posts with pagination.
- Anyone can see specific club information by clicking on the explore button on every club description option.

Using Tools: *React, React-Router, Bootstrap, API, and other essential elements.*
